

PACE Software Upgrade Procedure

1 Introduction

This document details the process for downloading PACE software from the GE web site and installing the downloaded software into a PACE pressure controller or pressure indicator.

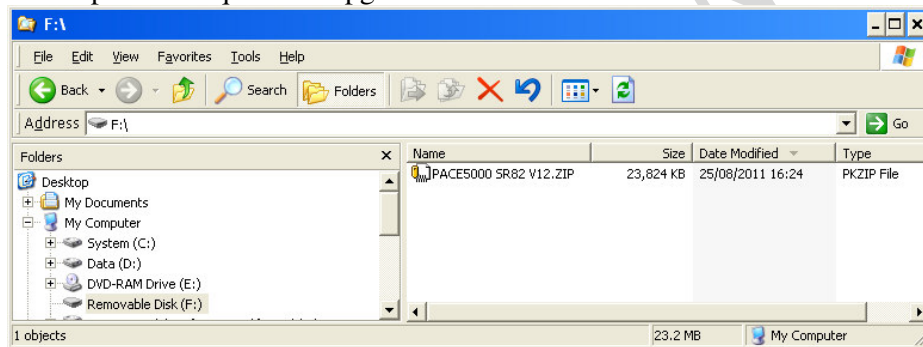

2 Pace Software upgrade

Insert a blank USB mass storage memory device into a PC.

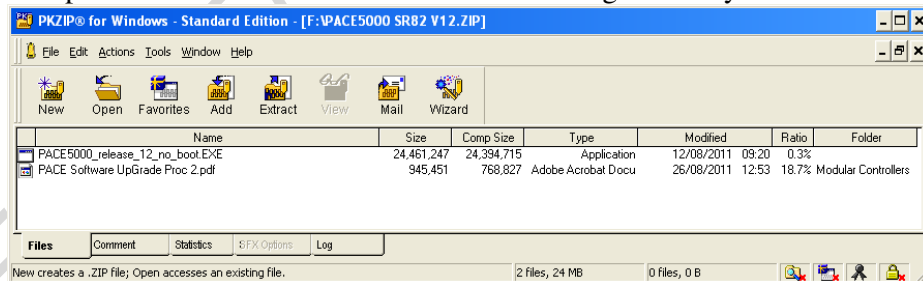

Open the GE Measurement & Control Solutions by selecting the link below:

<http://www.ge-mcs.com/>

Download and save to the USB mass storage memory device the software for the PACE product required to upgrade

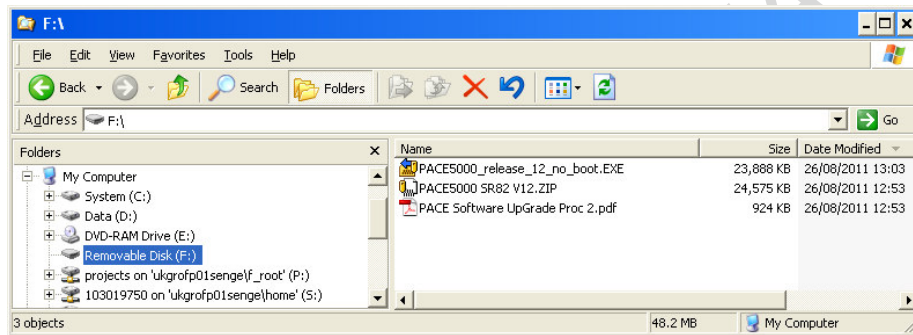

Unzip the downloaded file to the USB mass storage memory device root folder

PACE Software Upgrade Procedure

Extract the all files to the USB mass storage memory device root folder

Open the exe file and extract to the USB mass storage memory device root folder

PACE Software Upgrade Procedure

The following folder structure should now be present:

Remove the Memory stick from the PC.

Power-off the PACE and then insert the above mass storage memory device into the PACE USB port.

Power-on the PACE and then enter the software upgrade menu as follows:

- Select Global Setup>>Supervisor Setup>>Enter “0268” Supervisor PIN
- Select Comms>>USB>>Set Mode to Communications>>Exit Home
- Select the Measure Pressure display area
- Select the Global Setup Icon
- Select the Calibration ICON
- Enter the PIN = 5487

Upgrade the PACE software in the following order:

- Firstly - Module(s) Upgrade (not required by PACE1000)
- Secondly - Analogue & VFC Option(s) (only if fitted)
- Thirdly - OS Upgrade
- Fourth - Instrument Upgrade

Follow the display prompts to download each piece of software

Power the PACE off

Remove the memory stick.

PACE Software Upgrade Procedure
